Volunteers: 260

(excludes part-time staff)

A Great Opportunity

Gaylord is seeking donations to expand its Respiratory Therapy inpatient capacity by adding new ventilator and VapoTherm equipment and retiring older equipment as needed. Gaylord Hospital is the New England region's premiere rehabilitation facility for patients needing to be weaned off a ventilator. We have an 85% success rate that is as high as or higher than many of the nation's best hospitals. Gaylord is a Passy-Muir Speaking Valve Center of Excellence. We are recognized as a Passy-Muir Center of Excellence because we use Passy-Muir Valves as a standard of care for our tracheostomized and ventilator dependent patients. The valve allows patients on ventilators to speak with loved ones and medical personnel. This has decreased recovery time and enhanced the quality of life for our patients. We also are recognized for our use of VapoTherm technology to provide a more comfortable breathing experience for patients learning to breath on their own. It provides moisture for the throat and lungs which in turn helps patients breath easier. Gaylord is the only VapoTherm Center of Excellence in the U.S. "The VapoTherm Center of Excellence (COE) Program recognizes those health care facilities that best use VapoTherm technology to improve patient care and outcomes while maximizing the effectiveness and efficiency of facility staff and resources. VapoTherm COE partners are committed to excellence in their own facilities, and to sharing their knowledge, best practices and experience to improve the standard of care for all patients." Each ventilator and VapoTherm together cost approximately \$25,000. Our goal is to be able to purchase 4 sets of equipment; a total of \$100,000. The benefit to the patient is a dramatically improved quality of life because they could come to Gaylord to be weaned from the vent and it was made easier because of VapoTherm technology. The community benefits because there are less persons dependent on nursing home care. The person is more independent and able to be a part of their community activities and events. The cost to the patient, and the healthcare industry is expected to be less than someone that is living on a ventilator.
